

Use of SIH26036 - Online Verification System for Weighing and Measuring Instruments

Purpose

The Online Verification System is an e-governance platform developed to digitize the verification and certification process for weighing and measuring instruments regulated by the Legal Metrology Department. It replaces manual paperwork with an online workflow, making the process faster, transparent, and more efficient.

Uses of the System

1. Enables businesses to register weighing and measuring instruments online.
2. Allows users to submit requests for new verification, renewal, or re-verification after repairs.
3. Helps government officials assign inspectors and schedule inspections efficiently.
4. Generates secure digital verification certificates automatically after successful inspection.
5. Provides QR-code-based certificate verification for customers and enforcement officials.
6. Sends automatic reminders before certificate expiry to ensure compliance.
7. Maintains a centralized database of verified instruments and inspection history.
8. Offers dashboards and reports for monitoring pending applications, inspector performance, and district-wise statistics.

Benefits

- Reduces paperwork and manual errors.
- Saves time for businesses and government departments.
- Prevents fake or duplicate certificates.
- Improves transparency and accountability.
- Simplifies record management and public verification.
- Increases consumer trust in trade measurements.

Conclusion

The Online Verification System modernizes the Legal Metrology verification process by providing secure digital services for registration, inspection, certification, renewal, and public verification, resulting in improved governance and better consumer protection.
